

NiceVision® PDA Solution

SMART VIDEO
PROVEN VALUE

SECURITY ON THE MOVE

In today's fast-moving world, your security team needs to be alerted quickly to security incidents wherever they are and not tied to one place monitoring multiple screens. They need to be able to detect what's happening in real-time, verify instantly if an event represents a false alarm or imminent danger and take proactive decisions on the course of action.

This is where the NiceVision® PDA solution from NICE makes all the difference, sending alerts and high quality live video images direct to PDAs as soon as a suspicious event occurs. With one click, security officers in the field can assess any potential threat and track the event while approaching the event location, enabling a fast resolution of the situation.

CCTV VIDEO IMAGES AT YOUR FINGERTIPS

Whether it's an unauthorized person crossing a perimeter fence, an unattended bag left in a crowded terminal or a vehicle parked in a no-parking zone, your security staff can view and track video of the security incident in real-time on their PDA screen, control the relevant cameras and playback the last few minutes for instant verification. They can also check previous alerts and review relevant video footage from cameras located around the security incident. With reliable video data at their fingertips, security officers can resolve the situation in the field as quickly and effectively as possible, apprehend suspects, prevent serious incidents and speed up the investigation process.

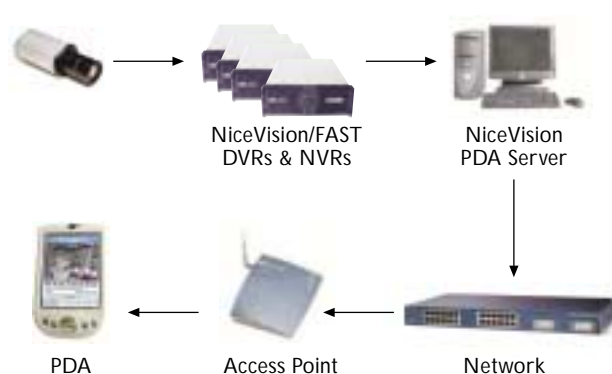

The NiceVision PDA solution provides cutting-edge technology and the flexibility needed to enhance security management and improve performance across multiple sites.

THE NICE ADVANTAGE: NICEVISION® PDA SOLUTION

The NiceVision PDA solution enables security officers to take a proactive approach to managing security using a wide-range of features and capabilities:

- Alarm management - automatic audio alarm notification, can pop up video upon alarm. The PDA screen displays a list of all incoming alarms, including alarm time, enabling users to review video images from previous alerts.
- Camera assignment - security staff can play video footage from any relevant cameras included in the list
- One split or four split (optional) displays, enabling security staff to control images from different cameras
- GPRS ready for existing mobile phone networks
- Integrates seamlessly with the full range of NiceVision/FAST video solutions
- Live/playback video request - can request live video, playback of last few minutes and replay of specific time period
- Playback operations includes: play, stop, pause, fast backward, play backward, frame by frame backward, frame by frame forward, fast forward
- On screen display - video analytics application name, such as intruder and vehicle detection, and suspicious person/object highlighted on the video picture, enabling a fast understanding of the situation
- Camera information display - shows camera name, play mode (live/playback) and video time while showing the video
- Scalable - additional streaming servers can be added in order to support additional PDAs

VIDEO STREAMING TO THE PDA VIA THE PDA SERVER

MAIN SPECIFICATIONS

- Supports PDA running Windows Mobile 2003 SE, Windows Mobile 5.0 and up
- View live/playback video stream at:
 - Video source resolution; up to 4CIF
 - QVGA PDA resolution in portrait mode, 232 x 174 pixels; in VGA mode, 468 x 351 pixels
 - Up to 15/12.5 fps; frame rate can be configured
- Supports full client functionality over standard TCP/IP network
- Supports video streaming over-TCP/IP
- User authentication - only authorized users can use the PDA application
