

CJIS Assist

CJIS Monitoring & Vulnerability Scanning

Fulfills CJIS Requirements within 5.15 & 5.19

Satisfies "System Monitoring" Under 5.15

US-Based Monitoring
24/7/365

Satisfies "Risk Assessment" Under 5.19

Vulnerability Scans & Reports

SecuLore's Security Operations Center (SOC) provides round-the-clock monitoring by a team of US-based cybersecurity experts. They use SecuLore's proprietary tools and technology to detect and respond to threats in real-time.

We will scan every endpoint for vulnerabilities at least monthly, with additional scans as needed to validate remediation efforts. To achieve this, we've partnered with Tenable to deploy Nessus, the Gold Standard in Vulnerability Management (VM).

We **CYBER-PROTECT** Our Nation's Critical Infrastructure

Goes Above & Beyond

Work Towards Remediation

Our SOC team will scan and report on any vulnerabilities with prioritized, actionable remediation steps, so that you can tackle the biggest risks first. We'll even run a new scan as needed to help you validate any changes.

Proven, Top-Notch Methodologies

This solution pairs SecuLore's proven monitoring methodology with the industry's top vulnerability management tool (Nessus). With those two tools, our SOC team is able to deliver top-tier risk management services.

On-Demand Cyber Analysts

As part of our monitoring services, you'll have on-demand access to our team of cyber analysts for any questions and concerns about your network, points of vulnerability, or cybersecurity.

Choose SecuLore for Public Safety

Funded by DHS & CISA

We received 2 rounds of Science & Technology Directorate funding to improve the cyber defenses of the nation's emergency infrastructure.

Contributed to APCO ANSI Standard

SecuLore's experts served on APCO's Cybersecurity Training Working Group to help create the ANSI Cybersecurity Standard.

Advisor to FCC & NENA

Our experts have been part of multiple CSRIC and NENA working groups and the Task Force for Optimal PSAP Architecture (TFOPA).
