

SALIENT **COMPLETEVIEW VMS**

COMPLETEVIEW VMS

Built with an open architecture, CompleteView integrates with thousands of cameras, access control, and analytics solutions. CompleteView empowers organizations to view, record, and manage video data while going beyond your security needs.

Whether you are a small business, a large global enterprise, or something in-between, CompleteView brings deployment simplicity and unmatched scalability while providing you with flexibility.

CompleteView v7 is Salient's foundation for delivering modern VMS capabilities. Drive productivity with predictive storage analytics, enhanced camera analytic event support, and updated search and playback experiences.

HIGHLIGHTS OF COMPLETEVIEW VMS

Interactive Mapping

Plot and view cameras on satellite-based GPS maps or imported custom images such as building floorplans to associate maps with views. Receive visual alerts on events, dynamically create views from cameras on maps, and display corresponding maps for cameras in Alarm View.

Responsive Clients

CompleteView delivers a fast, and consistent responsive user experience across desktop, web, and mobile clients. With Salient's proprietary Dynamic Resolution Scaling technology, the platform only sends what is needed to the client, reducing bandwidth and hardware requirements.

Technology Integrations

CompleteView's open architecture allows businesses to choose the access control, video analytics, and command & control technologies to create a customized solution to fit unique requirements.

Scalable Centralized Management

CompleteView provides centralized management, federation, and monitoring. Proactively manage cameras, storage, recorders, and users across the system using scalable interfaces.

Flexible Architecture

From small businesses to large enterprises, CompleteView has the flexibility to meet any deployment architecture. The platform can easily be virtualized, work with a wide range of network architectures, and supports a broad base of client devices.

COMPLETEVIEW EDITIONS

One

Ideal for businesses which need a single standalone server without centralized management or enterprise authentication. Supports web and mobile clients.

Subscription Offer Only

Pro

Ideal for businesses which require multiple servers and centralized management without enterprise authentication or failover. Supports an unlimited number of cameras and clients.

Subscription or Perpetual Offerings

Enterprise

Ideal for enterprises with distributed deployments that require AD/LDAP integration and failover.

Subscription or Perpetual Offerings
