# iRecord NEXUS

## Product Overview – June 2025

### What is iRecord Nexus?

iRecord Nexus is a cloud solution designed specifically to empower your iRecord system. Hosted in Azure Government, Nexus provides redundant storage, remote viewing and recording, and secure sharing of your recordings and other documents with partners.

iRecord Nexus was created to provide public safety, law enforcement, and child advocacy centers with the ability to easily store and securely share their recordings. It is the only cloud solution that is designed specifically for iRecord, adding ease of use and continued intuitive workflow.

iRecord Nexus allows swift adaptation to customer needs and feedback, no longer needing to upgrade your hardware and software to receive new features. In the first 6 months of the release, over 5 enhancements were released, and we are excited to continue providing more.

### What is Needed?

There are a handful of items needed for iRecord Nexus, and we can help you identify what is necessary to get there.

**iRecord Universe 4.0+** - 4.0 is the minimal version required to use iRecord Nexus.

**iRecord Capture Unit/Multi-verse Unit** – Depending on the age of your current iRecord deployment, you may need some hardware updates to handle the performance. This is a requirement for the iRecord Universe 4.0+ version.

**iRecord Nexus Subscription** – iRecord Nexus requires a subscription to the application. We can review your volume to determine your annual price.

Not sure what you may need? Reach out to your [iRecordInfo@wsi-tech.com](mailto:iRecordInfo@wsi-tech.com) and request a site survey to identify what it might take to get you to Nexus. Special promotions for existing customers are available upon purchase of a Nexus subscription.

## NEXUS

## Feature Overview

### Review

The review module of iRecord Nexus is the storage component of the secure Azure Government infrastructure. Allowing for migration, redundancy, and sharing of your recordings!

- **Storage** – iRecord Universe recordings can be configured to automatically upload to the cloud or be manually pulled into iRecord Nexus.
- **Recording Management** –Details can be edited, notes can be added, audit trails can be downloaded, and recordings can be deleted
- **Case Management** [Only in Nexus] – capability to group multiple recordings into a case and upload additional documents to be stored all together
- **Sharing** [Only in Nexus] – multi-factor authentication sharing of recordings or cases with expiration date, choice to include related information like notes, and ability to download.

### Record | Add-On

The record module provides end users with the ability to do just that – start and stop recordings without having to be on the local network!

- **Remote Viewing** – Ability to see in-progress recordings, and jump right into the view and listen to the stream
- **Start/Stop** – Ability to trigger a new recording or stop in-progress recordings
- **Real-Time Picture in Picture Management** – Ability to swap primary stream and in-picture stream in real time, as well as move the PIP box to different areas or side-by-side view
- **Real-time bookmarking** – add notes to identify key areas of the interview, which can be shared for collaboration

### System Management

We believe that our customers should be able to have the ability to do everything in iRecord Nexus that they can do in iRecord Universe. User management, Group management, and everything else! WSI Technologies is committed to increasing the controls for iRecord Admins and bi-directionally syncing settings and data between iRecord Nexus and iRecord Universe Capture Units.

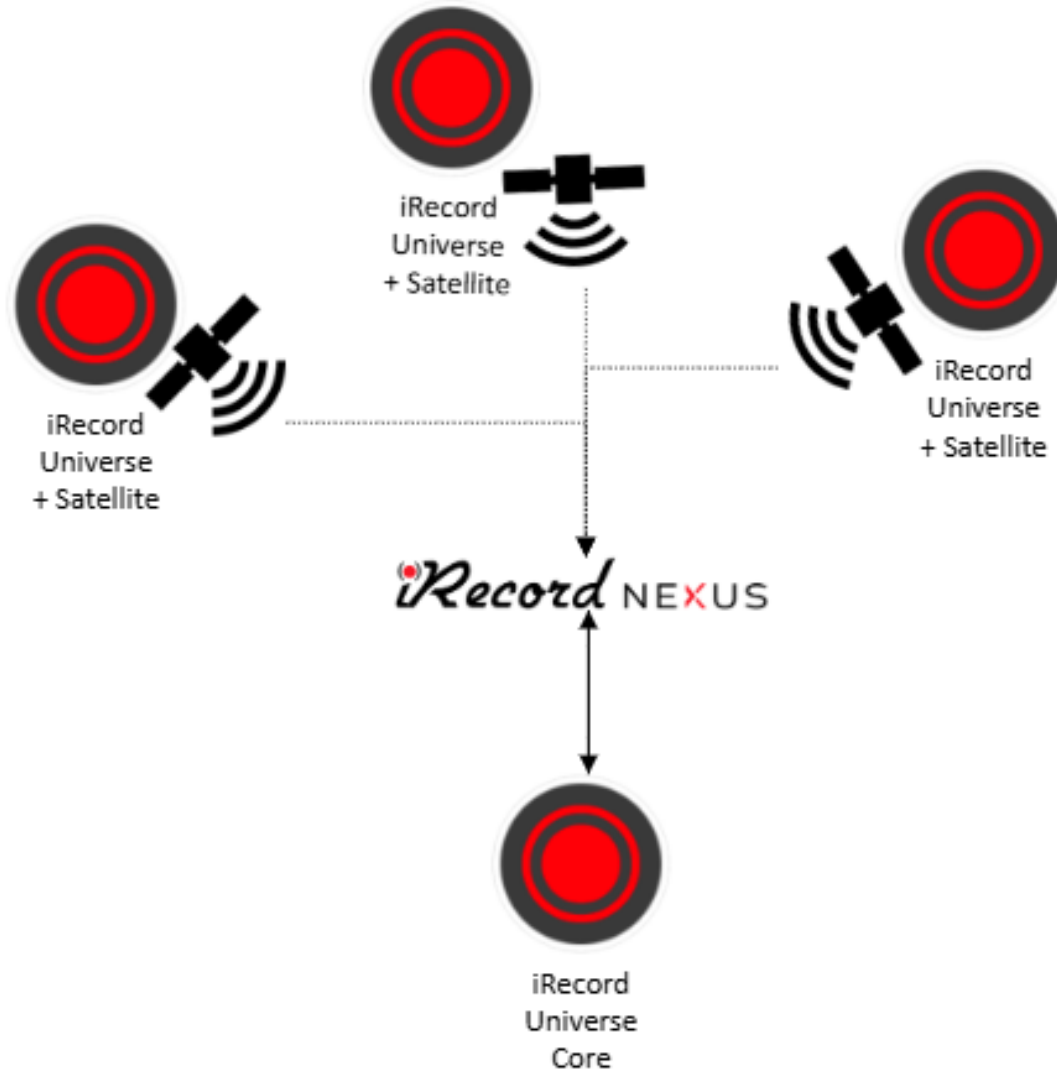

# NEXUS

## NEXUS Satellite

Customers with multiple capture units at multiple sites would need to have an iRecord Enterprise app license or a Nexus subscription per site... UNTIL NOW! Introducing Nexus Satellite Deployments. Organizations with multiple capture units and no iRecord Enterprise Application can now manage all their recordings in a single iRecord Nexus Subscription. Nexus Satellite deployments allow for all recordings to automatically upload and be ready for playback and sharing.

A single Nexus Subscription is purchased and associated with an iRecord Nexus Core License. iRecord Nexus Satellites are then deployed at other locations and connected directly to Nexus to upload recordings. Each satellite is associated with a group and can individually be configured for recordings to be uploaded either manually or automatically. Certain functionality, like Remote Viewing, is not available for Nexus Satellite. Alternative options are available.
