

Peace of Mind, Always in Sight

CyberSight is a managed cybersecurity monitoring solution that combines SecuLore's in-house SOC team with our own proprietary tools to safeguard your critical networks.

Safeguard your Critical Networks Before, during, and after a cyber attack.

Before

Risk Mitigation &
Advanced Threat Detection

During

Rapid Incident Response &
Mitigation

After

Post-Threat Analysis &
Remediation

Before

Risk Mitigation: Finding the Chinks in Your Armor

Through regular deep packet inspection of your real-world data, we identify and prioritize network vulnerabilities with powerful yet safe methods, while notifying you of any changes to your network to ensure continuity of operations.

- ✓ Identify gaps in your security stack & strengthen your Defense in Depth Strategy
- ✓ Prioritized vulnerability summaries
- ✓ Dedicated SOC analyst who knows your network and the latest cyber threats
- ✓ Weekly or monthly reports — set your own cadence

Before

At the Ready: Advanced Threat Detection

Thwart Attacks in Their Tracks

Our US-based Security Operations Center (SOC) will monitor your networks continuously, always watching for when an attack may strike.

- ✓ US-based SOC team has eyes on your network 24/7/365
- ✓ Easily dial up your level of protection if an attack is expected
- ✓ Passive non-agent-based network monitoring
- ✓ Smart, customized alerts detect anomalous activity
- ✓ Ongoing insight into new/emerging cyber threats
- ✓ Fewer false positive alerts, with machine learning and AI

During

Rapid Response: Confidence in Critical Situations

We're the first responders when an attack hits. Our entire SOC team jumps into action to leverage all of our available tools and expertise to aid response and remediation.

- ✓ Real-time guidance to contain threats and mitigate attacks
- ✓ Advanced threat detection for early response
- ✓ Visualize how an attack is moving to inform an adaptive remediation strategy
- ✓ Peace of mind in the event of false alarms

After

Post-Threat Analysis & Remediation

Our team will provide insight into how the attack happened, so you know how to better prepare for the future.

Forensic analysis of network packets to determine the exact attack vector

Comprehensive post-mortem to identify key takeaways

Guidance to address the exact and similar vulnerabilities
